AEROSOL

Since its invention, which meant to protect World War II soldiers from the diseases carried by mosquitoes, the aerosol packaging form is a mainstay in modern life.

Today's aerosol products come in many forms and offer a safe economical and environmentally compatible way to satisfy many every day needs.

Aerosol packages provide the solution to numerous problems. And improve our quality of life in many ways. As they provide benefits in medical treatment, health care, pest control, disease prevention, personal care and hygiene, and household, automotive and industrial cleaning and maintenance.

The aerosol delivery system can produce results unavailable from any other application method by controlling the product's particle size, spray pattern, volume and concentration. This unique combination of characteristics is often the only way to satisfy important needs that require the proper amount of product delivered exactly where it is needed.

Tinplate Specifications

Can Diameter	Pressure	Tincan body plate thickness	Tincan body plate temper	Cone thickness	Cone temper	Dome thickness	Dome temper
45	15 Bar	0.18	3	0.3	2	0.28	4
52	12 Bar	0.19	3	0.31	2	0.30	3
	15 Bar	0.20	3	0.33	3	0.33	3
57	15 Bar	0.20	4	0.33	3	0.30	5
	15 Bar	0.20	4	0.37	2	0.30	5
65	12 Bar	0.22	3	0.40	3	0.40	3
	18Bar	0.25	3	0.47	2	0.47	3

Components diameters

Can Diameter	Cone Diameter	Dome Diameter
45	41	42
52	48	50
57	52	54
65	60	63

ZA Packaging aerosol tin cans are produced in total compliance to FEA standards. With state of the art technology under a certificate of production 9001, in order to be 100% impermeable.
